

SO YOU'VE JUST ORDERED YOUR FIRST LIGHTBOARD KIT FROM US ... WHAT ELSE DO YOU NEED TO GET YOUR LIGHTBOARD STUDIO UP AND RUNNING?

EASY: JUST THREE MORE THINGS AND YOU'LL BE READY TO GO...

A) VIDEO RECORDING DEVICE

We suggest a USB Webcam with a resolution of **720p (HD) or Higher**. Being a USB device makes it very easy, quick and convenient to connect to your PC.

We **DO NOT** recommend using a camera with a Wide-Angle Lens (such as fisheye, or any camera with a Field of View greater than 80 degrees) as it WILL NOT work immediately with the LightBoard setup without additional software correction! *[Contact us for more details if you have a wide-angle camera already and wish to use it with your LightBoard]*

We **DO NOT** recommend using your webcam's integrated microphone, as capturing your voice from a distance will be difficult. Remember, you will be presenting from behind a Glass/Acrylic Windowpane!!

B) AUDIO RECORDING DEVICE

We suggest a dedicated USB Microphone that can either:

- (i) Sit on a desktop
- (ii) Hang over top of your LightBoard frame, via a Stand w/ Boom
- (iii) Attach to your clothing
- (iv) Clip onto your Lightboard frame (frame rails are 30mm thick)

Being a USB device makes it very convenient to connect to your PC without the need for additional hardware.

C) SOFTWARE FOR VIDEO STREAMING AND RECORDING

For Advanced Users looking to Impress, we suggest getting started with the Open-Source software **OBS Studio** (<https://obsproject.com/>). OBS offers plenty of powerful tools & filters for Professional looking Live & Recorded videos. **1-on-1 & Group Training for OBS is available from Lightboard Depot Inc.**

For Users who only require Basic functionality, such as Writing, Mirroring their Camera, and quickly swapping between the Lightboard and PowerPoint or a Window Share, we recommend **Logitech Capture** (<https://www.logitech.com/en-us/software/capture.html>). Logitech Capture will get you running in minutes without the steep learning curve. *[Note: Logitech Capture with ONLY work with Logitech Webcams]*

OTHER THINGS YOU MAY NEED...

- a **TRIPOD** for your video camera and/or microphone boom.
 - If you've got a Sit-Stand kit, we recommend having a tripod that has a manual hand-crank adjustment to make setup quicker and easier to go along with your adjustable tabletop). Our Stock kits do NOT include this tripod.
- A **Power/Surge bar & Extension Cables** for your Studio
 - When everything is set up, your studio can use anywhere from 4 up to 6 electrical outlets or more and may need the convenience of longer extension cables and/or Surge bars to increase the number of available sockets.
